

ENERCO

Energy Control and Optimisation

Presentation

Monitoring and archiving system of electrical consumption in industrial companies. On-line monitoring and archiving of electrical parameters of powerful machines.

01

Modular

Able to supervise an unlimited number of machines at a rate of eight machines per central.

Installation

Quick and easy installation without the need to stop the machines.

02

03

Display

Monitoring on web interfaces, mobile and local server.

Communication
WIFI or WIRED

ENERCO

Energy Control and Optimisation

Technical specifications

- ⊗ Measures single-phase and three-phase voltages up to 700V
- ⊗ Measurement of the current in each line between 5 and 5000A.
- ⊗ Measurement of active, reactive and apparent power and $\cos(\varphi)$ per phase.
- ⊗ Calculation of the harmonic distortion rates at the power distribution cabinet.
- ⊗ Transient voltage analysis.
- ⊗ Wired Ethernet or WIFI connection.
- ⊗ Data recording every 10s to 60 min in a cloud storage space or local server.
- ⊗ User-friendly Web interface allowing real-time visualization and access to the measurement history in graphical or tabular mode.
- ⊗ Data export (Excel, csv, image,...)
- ⊗ Internal storage in offline mode and automatic synchronization until the connection is restored.
- ⊗ Generation of reports: faults, energy balance, history
- ⊗ Estimate of the invoice per machine or group of machines and for a programmable period in days and hours.

ENERCO

Energy Control and Optimisation

Added value

With
ENERCO

Real-time consumption monitoring

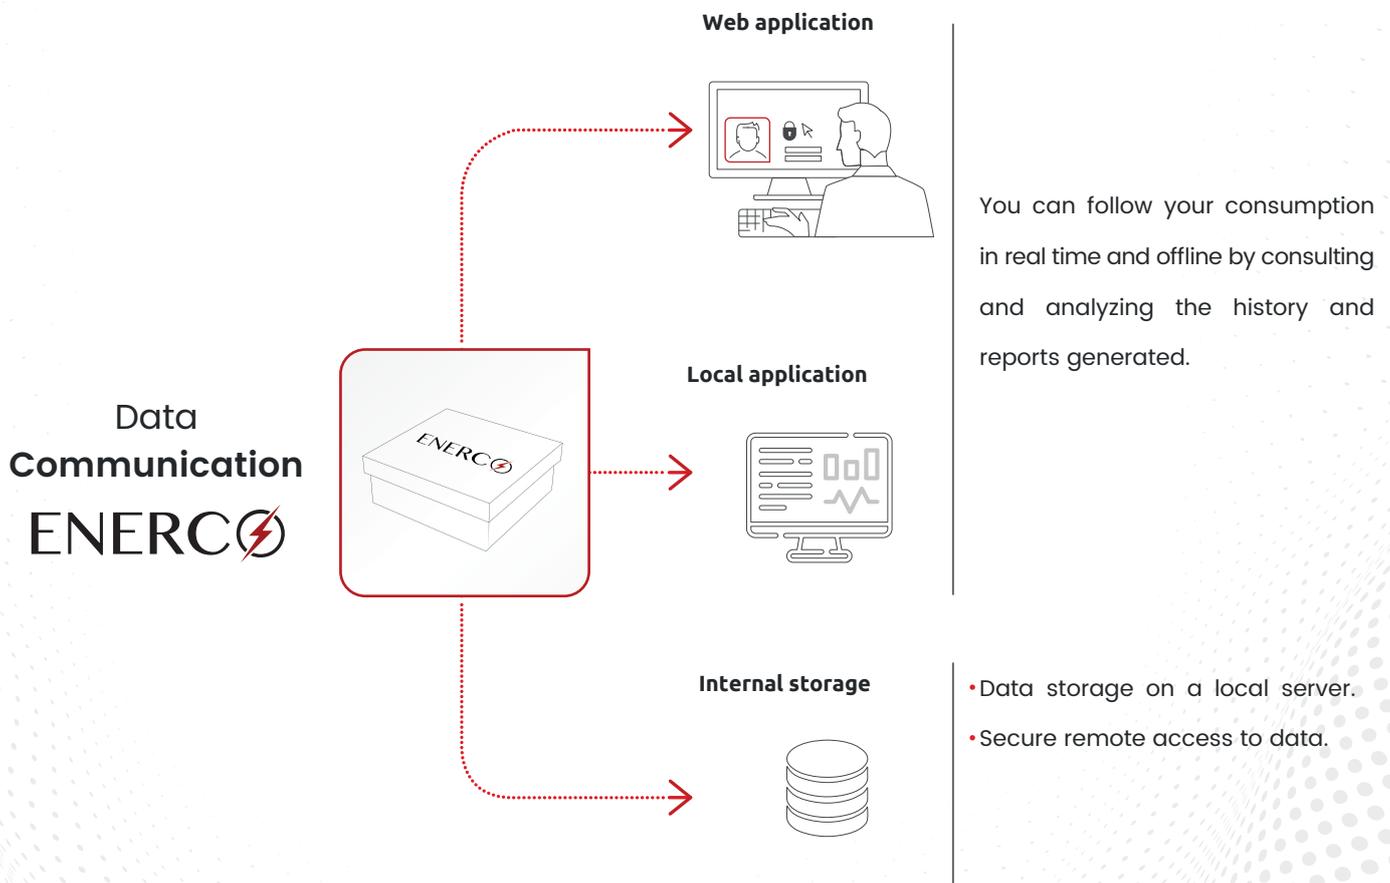

Real-time monitoring of all electrical parameters.

Faster detection of anomalies

Detection of unexpected grid faults:
Faster diagnosis and intervention

A control of the consumption

Availability of various analyses and statistics.
Energy audit and estimation of energy expenses.

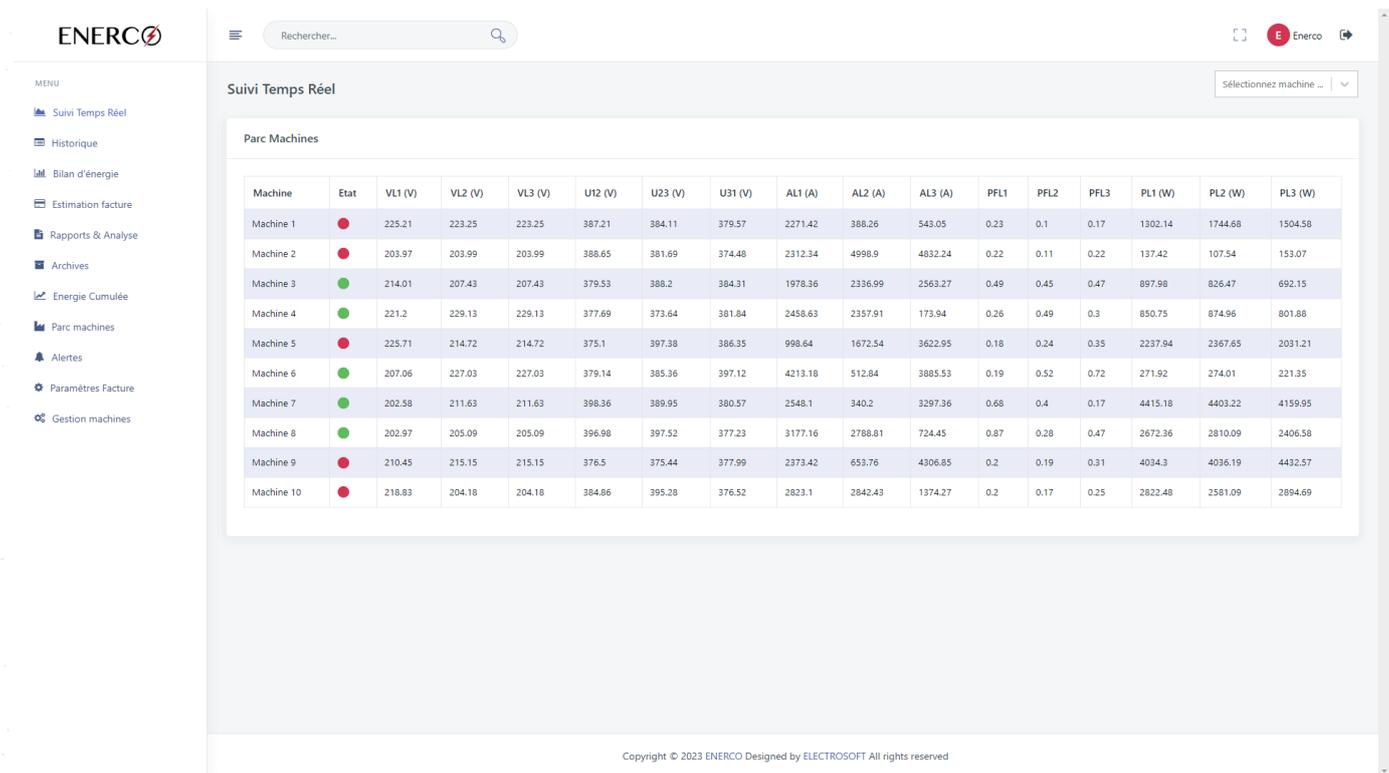

ENERCO

Energy Control and Optimisation

Monitoring application

Real time monitoring of all electrical parameters
with several modes (numerical and graphical)

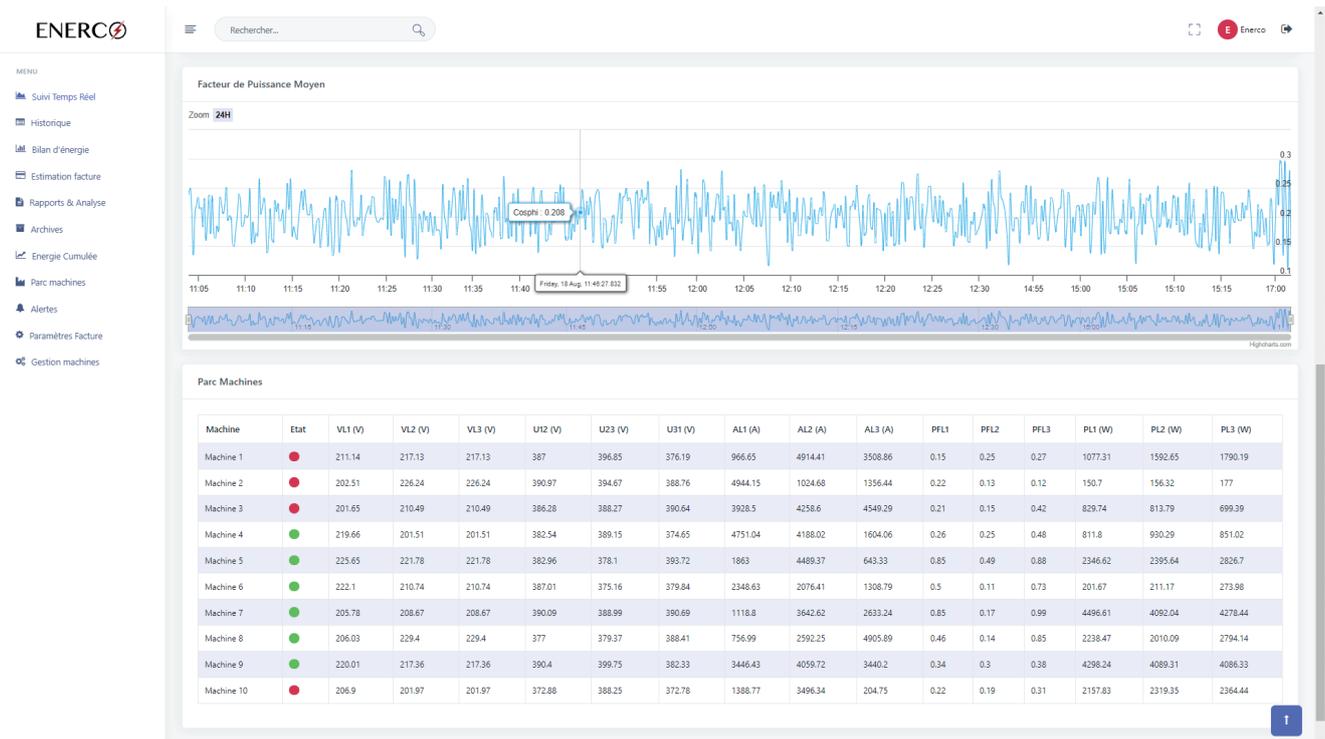

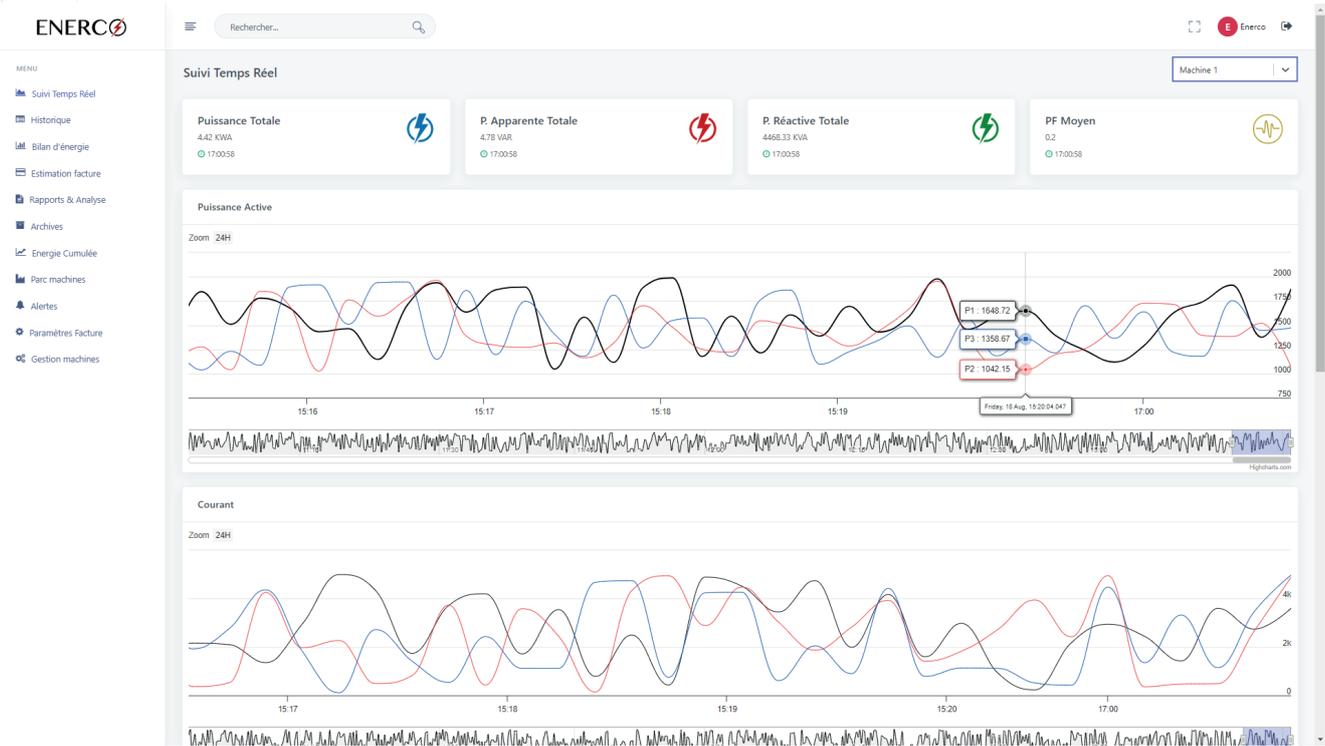

The screenshot displays the ENERCO monitoring application interface. On the left is a navigation menu with options like 'Suivi Temps Réel', 'Historique', 'Bilan d'énergie', etc. The main area is titled 'Suivi Temps Réel' and contains a table labeled 'Parc Machines' with 10 rows of machine data. Each row includes columns for machine name, status (indicated by a colored dot), and various electrical parameters such as voltages (VL1-VL3, U12-U23, U31), currents (AL1-AL3), power factors (PFL1-PFL3), and power (PL1-PL3).

Machine	Etat	VL1 (V)	VL2 (V)	VL3 (V)	U12 (V)	U23 (V)	U31 (V)	AL1 (A)	AL2 (A)	AL3 (A)	PFL1	PFL2	PFL3	PL1 (W)	PL2 (W)	PL3 (W)
